

1.Registration Form

The screenshot shows a web browser window with the URL `localhost/student_registration_system/register.php`. The page features the UTM (Universiti Teknologi Malaysia) logo and the title "Add New Student". The form is divided into three main sections: "Student Personal Details", "Academic Information", and "Subject Selection".

Student Personal Details: Includes text input fields for Name, Matric No., Email, and Phone number. It also has radio buttons for Gender (Male/Female) and a date picker for Date of Birth.

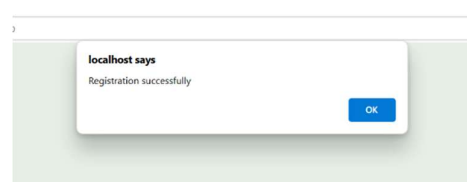

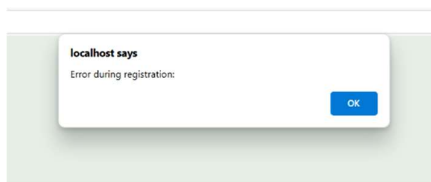

Academic Information: Includes dropdown menus for Programme of Study (currently set to "Data Engineering") and Year of Study (currently set to "Year 1").

Subject Selection: Includes checkboxes for Digital Logic, Discrete Structure, Programming Technique 1, Programming Technique 2, and Computer Organization Architecture.

At the bottom of the form, there are two buttons: "Add Student" (green) and "Reset" (red). Below these buttons is a link that says "View Registered Student List".

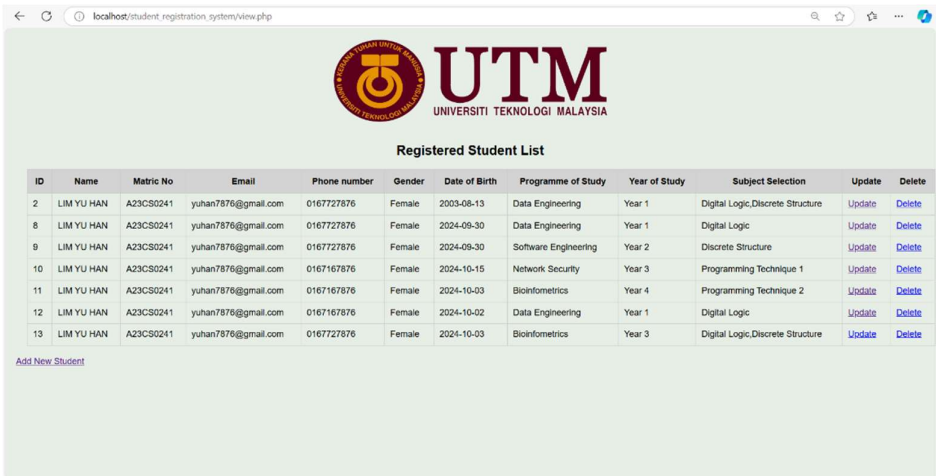

This is the interface for an empty student registration form, which include sections for personal details, academic information and subject selection. The form has a centered design with a light green background, creating a clean and user-friendly layout.

The personal details section includes text fields for name, matric number, email, phone, date of birth and radio buttons for gender selection. Each field has the `<required>` attribute for form validation, ensuring all necessary information is provided. In academic information section, dropdown menus allow users to choose their programme of study and year of study. Lastly for the subject selection section, checkboxes let the user select multiple subjects, and I have put a JavaScript validation that requires at least one subject selection.

The **Add Student** and **Reset** buttons has styled with light colours and borders that change on hover. A JavaScript alert displays upon successful registration or error. After successful form submission, users are redirected back to the empty registration form, ready for adding more students.

2.Student List

ID	Name	Matric No	Email	Phone number	Gender	Date of Birth	Programme of Study	Year of Study	Subject Selection	Update	Delete
2	LIM YU HAN	A23CS0241	yuhan7876@gmail.com	0167727876	Female	2003-08-13	Data Engineering	Year 1	Digital Logic,Discrete Structure	Update	Delete

[Add New Student](#)

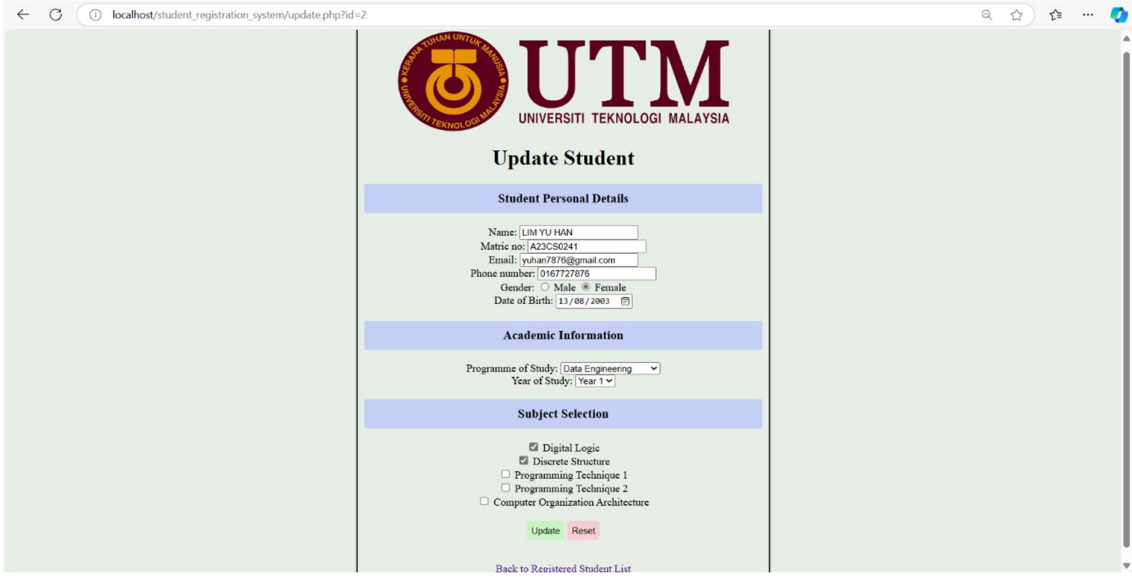

This interface displays a Registered Student List in a table format. This page uses a light green background and the <h2> element gives a clear title to the page.

The table spans the full width of the page for readability, with borders for each cell. The <th> element is styled with a light grey background and centered text, make it visually distinct from the rest of the table. **Update** and **Delete** links are included for each record, enabling easy modifications.

The data is fetch from the students table in the database using a prepared statement to improve security. A PHP loop dynamically generate each row of student data to provide a list view of registered students. If no data is found, a single row displays “No Data Found.”

There are also a link at the bottom of page to allow users to go to the registration form and add a new student entry.

3.Update Form

The screenshot shows a web browser window with the URL `localhost/student_registration_system/update.php?id=2`. The page features the UTM logo and the text "UNIVERSITI TEKNOLOGI MALAYSIA". The main heading is "Update Student". Below this, there are three sections: "Student Personal Details", "Academic Information", and "Subject Selection".

Student Personal Details

Name: LIM YU HAN
Matric no: A23C50241
Email: yuhan7876@gmail.com
Phone number: 0167727076
Gender: ☐ Male ☒ Female
Date of Birth: 13/08/2003

Academic Information

Programme of Study: Data Engineering
Year of Study: Year 1

Subject Selection

☒ Digital Logic
☒ Discrete Structure
☐ Programming Technique 1
☐ Programming Technique 2
☐ Computer Organization Architecture

Update Reset

[Back to Registered Student List](#)

This Update Student interface closely mirrors the layout and style of the Student Registration form, maintaining consistency in design. It is intended to allow users to edit the details of an existing student record.

When a student ID is provided in the URL, PHP retrieves the corresponding data from the database and pre-fills each field. Text input, radio buttons for gender, dropdowns for programme and year of study, and checkboxes for subject selection are pre-selected based on the student's existing information.

Update and **Reset** buttons feature the same styling and hover effect as the registration form.

When submitted, a JavaScript alert informs users of a successful update or any errors. After updating, the user is redirected to the registered student list page.
