

PREPARING STUDENTS FOR THE AI ERA

INTEGRATING RELEVANT SKILLS INTO MODERN EDUCATION

BY: LIM YU HAN, SEC 55

1 Introduction

- AI is part of everything today.
- Tools like ChatGPT are widely used in universities.
- But many students don't know how to use them critically.
- The poster explores the **gap** between AI use and student readiness.

2 Why it Matters

- Builds digital and critical thinking skills.
- Keep education relevant to modern career.

Counter-argument:

- Some say AI is already used
- But passive use ≠ understanding.

3 Root Cause + Effects

Causes of the Problem

- AI tools are used **for** students, not **to** taught to them.
- AI learning is often limited to STEM fields.
- Many educators aren't trained in AI use or ethics.

Effects of the Problem

- Student misuse or over-rely on AI tools.
- Lack skills like prompt engineering.
- Graduates are underprepared for AI-powered jobs.

4 Solutions

1. Integrate AI Literacy for All Students

- Many students never learn how AI works.
- Teach foundational concepts.
- Embed into general education modules - not just for computer science students.

🎯 Helps all students think critically about AI's role in daily life.

2. Teach Prompt Engineering and Hands-on Skills

- Students don't know how to ask right questions to get useful answers.
- Guide students to compare AI outputs and revise prompts based on real-time results.
- Build creativity, logic and evaluation skills.

🎯 Shift them from passive users to reflective, creative thinkers.

4 Solutions

3. Promote Adaptability and Lifelong Learning

- AI tools evolve fast.
- Students should feel comfortable trying out new tools.
- Let students explore different AI platforms as part of assignments.

🎯 Help student become resilient and ready for constant change.

5 Conclusion

- AI will only grow stronger—education must evolve.
- These three steps ensure students don't just survive, but lead in the AI era.
- The future belongs to learners who grow with technology.
